

**Note:**

- 1) Positions A and B are recommended.
- 2) Position C causes a significant bass boost and may cause asymmetrical spatial imaging one subwoofer is used.
- 3) Positions C and D may also work, but may cause loss of LF when off room center axis.

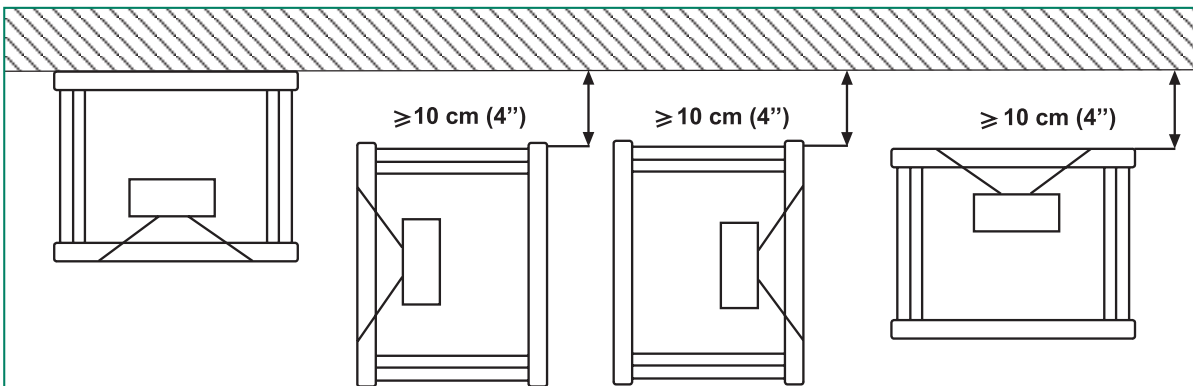

**Suggested Tone Control Settings**

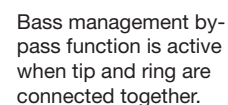

**Subwoofer Placement**

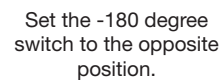

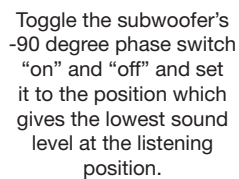

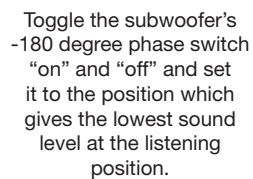

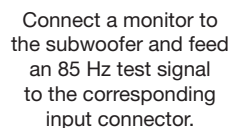

**Distance from Front Wall**

**Aligning the Subwoofer**

## Bypass Switch Connection

## Phase Alignment
